YELLOW-LEGGED 'ASIAN' HORNET

'Vespa velutina'

The yellow-legged hornet is an invasive species that predated on honey bees and other important pollinators.

If allowed to become established in the UK it could have a serious impact on our native species and the wider ecosystem.

Any sightings should be reported, along with a photo, on the Asian Hornet Watch app (available to download on Android and iPhone from the app store) or emailed to 'alertnonnative@ceh.ac.uk'.

YELLOW-LEGGED HORNETS CAN REACT AGGRESSIVELY IF THEIR NEST IS THREATENED. REMAIN A SAFE DISTANCE OF 10M AWAY FROM SUSPECTED NESTS AT ALL TIMES
